

P1: Getting Started – Plan and Build

This task helps you connect with FIT2107 Software Quality and Testing assessment, the planning necessary to pass, and the tools you will use throughout the unit.

An opportunity to build your ability to:

- Describe how the unit works, and use this to ensure your approach to study will get you the results (learning and grades) you want. Including the ability to describe:
 - How assessment in this unit works.
 - The critical nature of task discussions.
 - How you can use the feedback process to ensure success.
 - Weekly time commitments (inside and outside of class).
- Plan out how you will engage with the unit.
- Install and use the development tools needed for this unit.
- Reflect on your current knowledge and your goals in the unit.

Give us:

- A PDF with your completed P1 Worksheet (available in the task resources).

We will:

- Be keen to help you understand how the unit works
- Help you get things installed and set up, and check that it's working.
- Help you connect with others in class.
- Ensure you have indicated that you understand how the unit works and the required study commitments.
- Provide you with feedback on your submission.
- Sign this task off, or provide you with additional feedback, in our next in class discussion (subject to all the terms and conditions you now understand).
